THANK YOU SO MUCH FOR PURCHASING OUR THEME!

THIS IS A QUICK SETUP AND USAGE GUIDE COVERING ONLY VERY BASIC ASPECTS OF THE THEME WITHOUT IN-DEPTH EXPLANATION. IT IS RECOMMENDED TO SEE FULL USER MANUAL.

ALSO SEE HELP JPG IMAGE FILE IN THE SAME FOLDER FOR VISUAL REFERENCE.

1. Install and activate theme

Automatic installation

1. Download ZIP package from Themeforest and unzip it.
2. In unzipped folder you will find [promotion.zip](#) file. Do not unzip it one more time.
3. In your Wordpress Dashboard navigate to [Appearance > Themes](#).
4. Click on [Install Themes](#), click Upload and browse the [promotion.zip](#) file and click [Install Now](#).
5. After installation is complete click on [Activate Theme](#). Theme is now installed.

Manual Installation

1. Download ZIP package from Themeforest and unzip it.
2. In unzipped folder you will find [promotion.zip](#) file. Unzip it one more time.
3. Simply put unzipped theme folder into your [wp-content/themes](#) directory.

2. Import Demo Content*

*This step is optional! You can get the code also by clicking “get the code” button on the bottom of feature pages.

If you want to make your website look similar to live preview, you can import Demo Content file. To import demo content use [Tools->Import->Wordpress](#) in your dashboard. Then browse the [promotion-demo-content](#) xml file in Demo_content folder inside your download package.

NOTE: Only the content will be imported. You will have to set widgets and also create sliders per instructions.

3. Set Home Page

Go to [Settings->Reading](#) and select which page to be your home page and which to be the blog.

4. Create Menus

ProMotion Theme is using Wordpress Menus, that means you can easily control them with handy drag and drop interface.

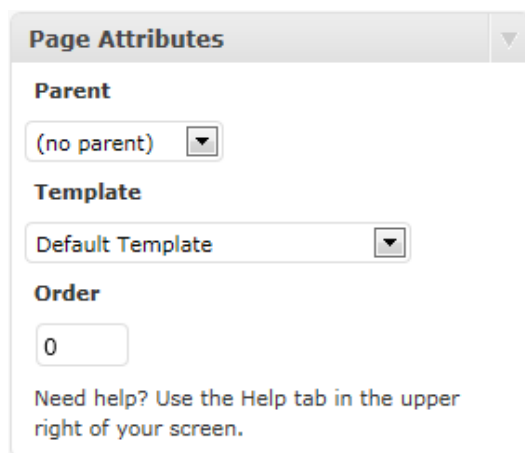

To create menus for your navigation follow these steps:

1. In your Wordpress Dashboard navigate to [Appearance > Menus](#).
2. To create new menu enter a name for it and click [Create Menu](#).
3. Now select pages you want to appear in menu and click [Add to Menu](#).
4. Now when the pages are added to your menu drag them to change order as you like; to create sub menu just drag menu item slightly to the right and Wordpress will place it as sub menu.
5. When ready click [Save Menu](#).
6. Select your menu in [Theme Locations](#) dropdown and click [Save](#).

5. Add and edit page or post

All steps here are done when editing a page or post. When adding page or post you have to:

1. **Select page template**

The screenshot shows the 'Page Attributes' sidebar in a WordPress editor. It has a title bar 'Page Attributes' with a dropdown arrow. Below the title bar, there are three sections: 'Parent' with a dropdown menu showing '(no parent)', 'Template' with a dropdown menu showing 'Default Template', and 'Order' with a text input field containing '0'. At the bottom of the sidebar, there is a line of text: 'Need help? Use the Help tab in the upper right of your screen.'

2. **Select page header** – here you can select a slider for a page or anything else. Please see full user manual for complete instructions.

Page Options

Select Header Element:

None

* To select header for blog go to Appearance / Theme options / Blog Options

Custom background color:

* Example: #FFCC66

Custom background image url:

* Make sure you input FULL urls to the image (including http://)

Background repeat:

Repeat both

Background position:

* The first value is the horizontal position and the second value is the vertical. Example: 50% 0%

☐ Enable before content widget area

3. **Add custom sidebar** if needed. It will appear in [Appearance->Widgets](#) section when selected.

Custom Sidebar

☒ Activate Custom Sidebar?

Select a sidebar to replace:

☐ Top Widget Area - The top widget area

☒ Primary Widget Area - The primary widget area

☐ Footer Widget Area 1 - The first footer widget area

☐ Footer Widget Area 2 - The second footer widget area

☐ Footer Widget Area 3 - The third footer widget area

☐ Footer Widget Area 4 - The fourth footer widget area

☐ Copyright Widget Area - The copyright footer widget area

☐ Sliding Sidebar Widget Area 1 - The first sliding widget area

☐ Sliding Sidebar Widget Area 2 - The second sliding widget area

☐ Sliding Sidebar Widget Area 3 - The third sliding widget area

☐ Sliding Sidebar Widget Area 4 - The fourth sliding widget area

4. How to **add shortcodes and contact form**:

5. Sliders

Please see full user manual for creating sliders. Once created just insert it as shortcode or choose as header in page options depending on what slider you use.

6. Widgets

To add your widgets to sidebar, footer or sliding sidebar go to Appearance->Widgets. (To enable sliding sidebar go to Theme Options->Footer/sliding sidebar and uncheck disable sliding sidebar)

And here is the code for first footer widget (it is a text widget):

```
[list style="home"]<ul><li>Street, City, Country, 0000</li></ul>[/list]
[list style="phone"]<ul><li>0000-0000-0000</li></ul>[/list]
[list style="email"]<ul><li>[div style="margin-top:-1px;"]info@mnkystudio.com[/div]</li></ul>[/list]
[list style="skype"]<ul><li>[div style="margin-top:-1px;"]my-skype-name[/div]</li></ul>[/list]
[list style="twitter"]<ul><li>my-twitter-name</li></ul>[/list]
```

And the code for contact form page right side widget:

```
<h6 style="margin-bottom:5px;">Address One</h6>
[list style="home"]<ul><li>Street, City, Country</li></ul>[/list]
[list style="phone"]<ul><li>1-800-200-8765</li></ul>[/list]
[list style="email"]<ul><li>[div style="margin-top:-1px;"]info@caremedical.com[/div]</li></ul>[/list]
[list style="twitter"]<ul><li>twitter-name</li></ul>[/list]
[list style="skype"]<ul><li>skype-name</li></ul>[/list]
```

<h6 style="margin-bottom:5px;padding-top:10px;">Address Two</h6>

[list style="home"]Street, City, Country[/list]

[list style="phone"]1-800-200-8765[/list]

[list style="email"][div style="margin-top:-1px;"]info@caremedical.com[/div][/list]

[list style="twitter"]twitter-name[/list]

[list style="skype"]skype-name[/list]

<h6 style="margin-bottom:5px;padding-top:10px;">Address Three</h6>

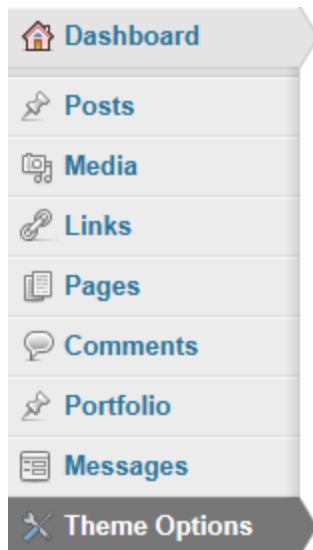

[list style="home"]Street, City, Country[/list]

[list style="phone"]1-800-200-8765[/list]

[list style="email"][div style="margin-top:-1px;"]info@caremedical.com[/div][/list]

7. Theme Options

To change appearance and other features of your theme go to theme options and see explanations next to the fields.

Tips & Troubleshooting

1. Copyright area (bottom bar)

To add copyright text to your site go to [Appearance->Widgets](#) and add text widget with your text to a Copyright Widget Area.

To add bottom menu, go to [Appearance->Menus](#) and set menu for a Footer Navigation.

2. To Top Button

To add to top button add a custom menu item to a footer navigation's menu and enter : [#top](#) as an URL.

3. I have reset theme options what should I do? / You still have theme options from your previous theme.

Open *promotion/functions/theme_options/theme_options_data* and download two files you find there to your computer or find them in downloaded package.

Now delete them from the folder.

Go to your dashboard and refresh, you will see Settings tab for theme options. Go to *Settings->Import* and copy all the content from .txt (not xml just txt) file you downloaded to the Theme Options Data field and click Import data.

All should be good

4. Read more and images are not showing in post slider

To make read more button appear please set Excerpt Words value. Images are taken from post featured image, so to make them show up you should insert them as featured image.

5. Nivo slider and jCarousel not showing images

First you have to make sure images are attached to the post, so they are present in gallery section of the post. And you can see that in media library next to the image.

Then try setting promotion/functions/shortcodes-ultimate/lib/cache folder 755 or 777 permissions.

6. Divide post or page into multiple pages

To divide post or page into pages add `<!--nextpage-->` where you want page to end.

7. Add “Read More” to the post

To add read more button to your posts, you should use WordPress more tag. In visual mode you will see this icon:

And in HTML mode it is:

Place it where you want text to end for the blog front page.

8. Parse error during upload

If you encounter error similar to this during theme activation, it means that some of the files have not uploaded correctly:

Parse error: syntax error, unexpected T_FUNCTION in /wp-content/themes/promotion/functions/sidebars.php on line 1

To fix it, just reupload (**select binary transfer mode in your ftp client**) the whole theme in binary mode.

9. Script declare error during upload

If you experience any script declare errors (Fatal error: Cannot redeclare...) during installation please deactivate followings or delete its folder from [wp-content/plugins](#). These plugin's modified versions are already integrated.
